

Epic games overlay crashes game with our addon

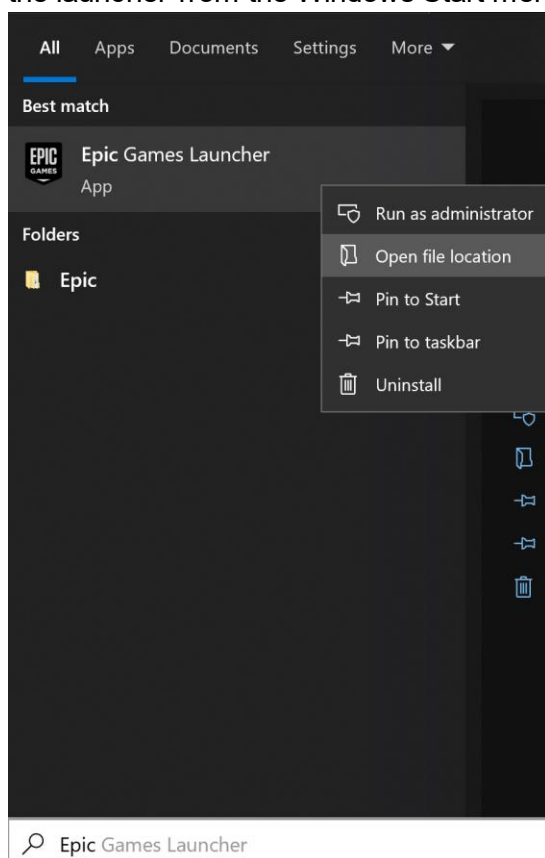

Some games exhibit the behaviour of crashing when our addon is installed alongside Epic Games on the system. There is a solution which is disabling the Epic Games overlay.

The following games have a known issue with the Epic Games Launcher overlay:

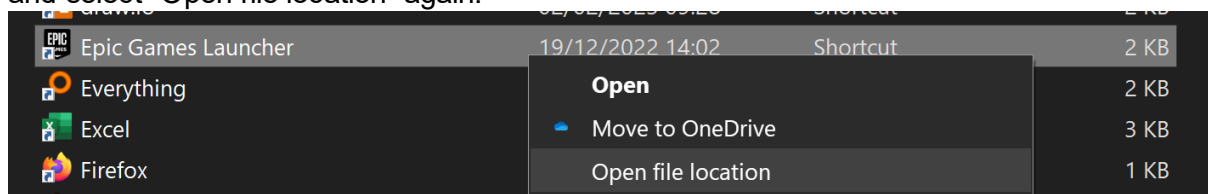

- Cities: Skylines
- Shadow of the Tomb Raider

Disabling the Epic Games overlay

1. Navigate to your Epic Games install directory, you can easily find it by right clicking the launcher from the Windows Start menu and clicking “Open file location”:

2. This will bring you to a shortcut to the Epic Games launcher, right click the shortcut and select “Open file location” again:

3. This will bring you to the install path of the Epic Games launcher.
For the case of this example it will be treated as: **“C:\Program Files (x86)\Epic Games\Launcher\Portal\Binaries\Win32”**

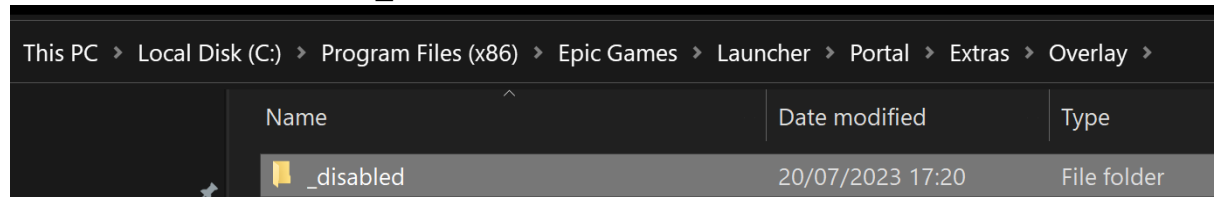

4. Navigate back two directories using the file explorer until you reach the folder called “Portal”.

For this example, it would be **“C:\Program Files (x86)\Epic Games\Launcher\Portal”**

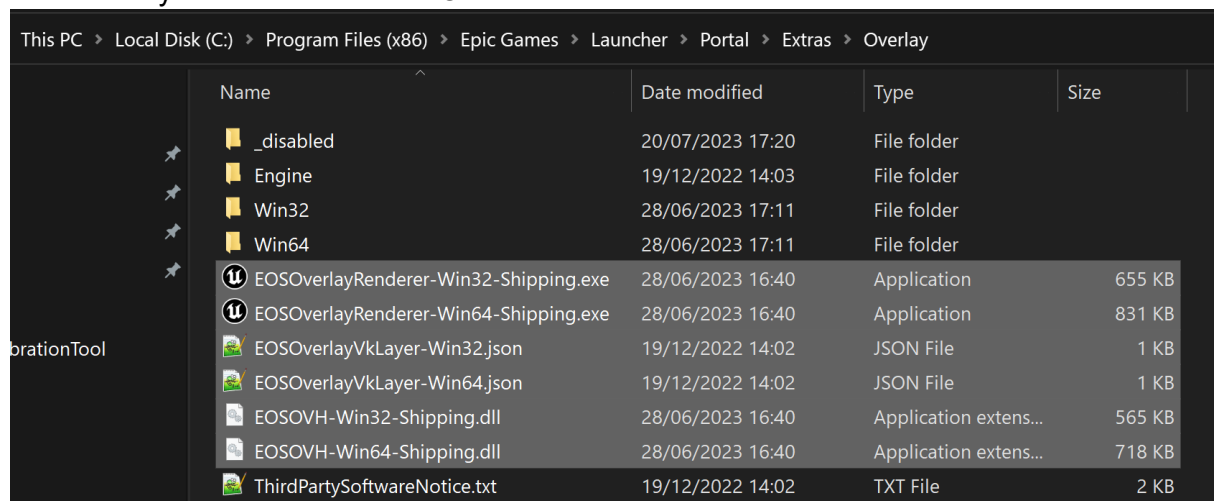

5. From this folder, navigate to “Extras” and then “Overlay”.

For this example, the path looks like: **“C:\Program Files (x86)\Epic Games\Launcher\Portal\Extras\Overlay”**

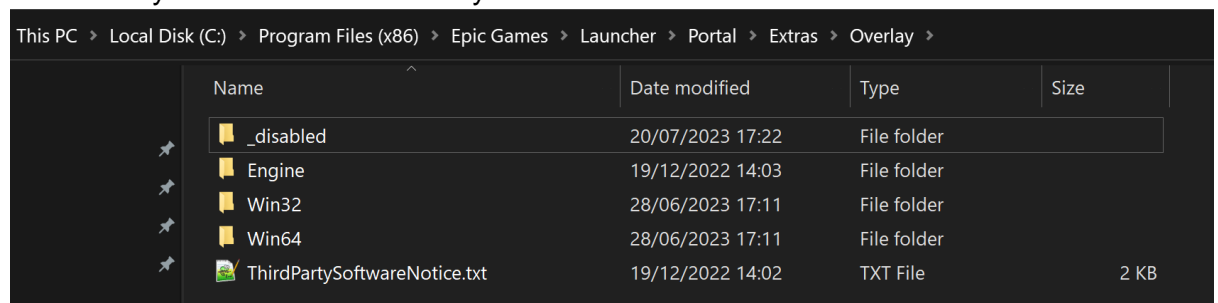

6. Make a new folder named: “_disabled” here:

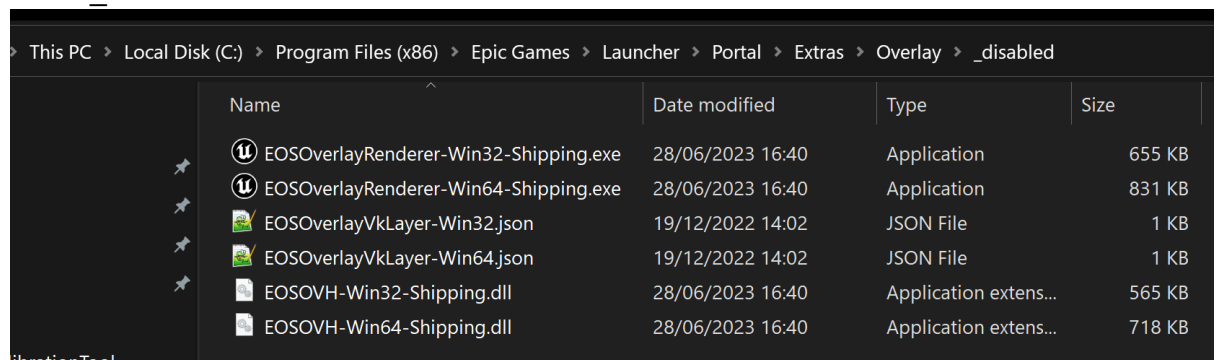

7. Select every file that start with “EOS” in this folder:

8. Move all of the selected files into the “_disabled” folder by dragging them into the folder with your mouse. Your overlay folder should now look like this:

Your “_disabled” folder should now look like this:

9. That's it! Try launching your game again and see if it works.
